

### *Walk Behind Sweeper Troubleshooting*

- **Not picking up properly.**
  1. Take sweeper to area where debris hopper can be emptied. Some sweepers may have two hoppers to empty (front and rear)
  2. Clean filters on a weekly basis
  3. Check side brush and main brush to ensure they are free of debris on a daily basis
  
- **Reduced run time.**
  1. Battery needs to be charged, make sure it has water. Some units have a sealed battery so there is no water maintenance required.
